

Radiation detection drones: multiple flights over the nuclear power site in Mol.

Last week the SABCA Unmanned Systems Business Unit, in cooperation with the Belgian Nuclear Research Centre [SCK CEN](#), performed multiple flights over the nuclear power site in Mol.

The purpose of the flight was radiation monitoring over one of the nuclear reactors. For this purpose, [SCK CEN](#) designed a radiological detector that [SABCA](#) integrated into the fuselage of one of its unmanned aerial vehicles.

Once again, [SABCA-UAS](#) has provided a robust and reliable end-to-end solution in safety critical and industrial environment.

Thank you for all the stakeholders who assisted in the preparation and executing of these flights.
